EDUCATION

Doctor of Philosophy in Computer Science

Spring 2022–Current

Advisor: Dr. Nitesh Saxena

Texas A&M University, College Station, TX

Bachelor of Science in Computer Science and Engineering

2015–2018

Thesis: Eye-Line: A voice controlled assistant for blind peoples

Daffodil International University, Dhaka, Bangladesh

PROFESSIONAL EXPERIENCE

Graduate Assistant - Research, Department of Computer Science and Engineering

Jan. 2022 – Present

Texas A&M University, College Station, Texas

- Led research projects that focused on discovering the accessibility and vulnerabilities of digital systems with novel solutions in cybersecurity, ensuring project milestones were met and results were effectively communicated through reports and presentations.
- Collaborated with research teams on various research initiatives, contributing to grant proposals and academic publications.
- Mentored undergraduate students and new research assistants, providing guidance in research methodologies and supporting their academic and project development.

Lecturer, Department of Computer Science and Engineering

Sept. 2019 – Dec. 2021

Prime University, Dhaka, Bangladesh

- Designed and delivered lectures, tutorials, and curriculum, while creating and assessing assignments, tests, and exams to maintain high academic standards.
- Conducted and supervised research, including publishing articles and supervising final-year undergrad students' thesis and projects.
- Represented the department in various academic committees and events.
- *Courses Instructed:* Cryptography & Network Security, Computer Networking, Design and Analysis of Algorithms, Data Mining.

Student Prefect (TA), Department of Computer Science and Engineering

Sept. 2017 – Aug. 2018

Daffodil International University, Dhaka, Bangladesh

- Assisted in conducting lab classes, providing hands-on guidance to students by addressing coding challenges, debugging errors, and ensuring a practical understanding of programming concepts.
- Conducted supplementary lectures to clarify complex topics, ensuring that students had a deeper and more comprehensive grasp of course materials.
- Administered lab tests, evaluated student performance, and provided constructive feedback to support their learning and skill development.
- *Courses Assisted:* Computer Graphics Lab, Data Structure and Algorithm Lab (C Programming Language).

RESEARCH EXPERIENCE

Accessibility and Security of Digital Systems

2022 – Current

- Analyzed academic research papers on authentication methods tailored for blind and visually impaired users, identifying critical vulnerabilities and highlighting gaps where researchers have overlooked the specific needs and behaviors of these users.
- Conducted analysis for the vulnerability and accessibility of real-life 2FA and MFA methods, focusing on visually impaired users.
- Executed diverse attacks in authentication scenarios involving visually impaired users, such as concurrency and fatigue attacks against push-2FA, real-time phishing attacks targeting OTP-based methods, and cross-service and downgrading attacks on FIDO-MFA to investigate vulnerabilities.

Security of AR/VR Devices

2022 – Current

- Developed **FaceReader**, a method to unobtrusively reconstruct vital signs from AR/VR device motion sensors.
- Demonstrated the application of FaceReader in advanced attacks, including Body Fat Ratio Estimation, User Re-identification, and Gender Recognition.
- Designed **SAFARI**, an acoustic spoofing and mimicking-resistant voice authentication system using viseme-based facial biometrics derived from AR/VR motion sensors during voice commands.

- Proposed a seamless authentication in XR devices using natural vital sign-induced vibrations like heartbeat and breathing patterns, captured by motion sensors.

IoT and Deep Learning-Based Secure Smart Healthcare

2020 – 2022

- Developed an IoT and deep learning-based smart healthcare system for accurate detection of skin lesions, enhancing early diagnosis and real-time patient monitoring.
- Integrated strong security measures to protect sensitive health data within the IoT framework, ensuring secure data transmission and storage.

Smart Devices in Human Behavior Manipulation

2020 – 2021

- Conducted a systematic analysis to identify different methods used by smart devices to collect user data and influence human behavior and explored how vendors and third-party entities utilize collected data for targeted marketing and behavior manipulation.
- Performed an exploratory user study to assess awareness of data collection and behavior manipulation by smart devices. The survey results reveal the significant impact of smart devices on user behavior and highlight a general lack of understanding regarding data privacy and potential data leakage risks.

Secured GSM-Based Smart Home Systems

2019 – Current

- Developed a GSM-based smart home system with multilayered security.
- Implemented multiple layers of security using Arduino, employing logic-based approaches to prevent unauthorized access.

Network-Based Intrusion Prevention System Inspired By Apoptosis

2016 – 2019

- Developed a novel model for a network-based intrusion prevention system inspired by the biological process of apoptosis.
- Trained machine learning models for real-time intrusion detection.
- Conducted attack generation and analysis on the system using packet sniffing techniques.

Smart Assistant with Vehicle Detection for Blind People

2017 – 2018

- Developed a voice-controlled smart assistant (Android application) tailored for blind and visually impaired users.
- Designed and implemented a real-time accessible vehicle detection algorithm within the app to enable independent travel for visually impaired users.

RESEARCH INTERESTS

Accessibility and Security of Digital Systems, Secure Accessible Authentication, Security of AR/VR Devices, Accessibility and Security for Diversity Groups, Security and Accessibility of Blind and Visually Impaired Users, Application of Machine Learning in Critical Systems.
